

# 5 Reasons Why CloudMosa Secure Browser is the most secure, smart and cost-effective Solution

Citing a survey, Goldman notes 45% of corporate CIOs expect to accelerate their spending on cybersecurity; one of the top items is to improve security in web browsing. If you are looking for an enterprise secure browsing solution, we'd like to help you to choose wisely. Here are the top 5 reasons that CloudMosa Secure Browser is the most secure, smart and cost-effective solution.

## Technological Superiority in Cybersecurity

As you can imagine, the most secure way to surf the Internet is to have two physically separate computers. One computer is used for work and other important tasks in an isolated network, and the other computer is used for web browsing. If anything happens to the second computer, the first one will still remain safe. Based on this concept, CloudMosa now offers you a second computer in our cloud. With our innovative system architecture, you can use your existing computer to remotely control the browser in our cloud, and your PC will stay safe all the time.

## SaaS – An Affordable, Reliable and Scalable Solution

The most well-known aspect of SaaS (Software as a Service) is its unique ability to lower enterprise total costs for hosting software services. With a Cloud-based Secure Browser solution, you can easily setup the secure browser for your organization in a half-hour. As your organization grows, you can simply add more users via the admin tools, and we will take care of the rest for you.

## Superior Experience

While most browsers depend on the limited local computing power to render web pages, our secure browser can leverage the cloud computing power to do everything better and faster. With the revolutionary Cloud architecture, our JavaScript and rendering engine can process web pages up to 400% faster than a regular personal computer. CloudMosa Secure Browser delivers an exceptional user experience for end-users.

## Platform Domination

Your enterprise may have different desktop platforms. No problem! CloudMosa Secure Browser supports all major versions of Windows desktop. In addition, we provide equal support for Linux desktop environment and will support Mac OS version very soon. We keep customers safe while browsing on all desktop platforms.

## Smart Bandwidth Saving

Modern web designs are getting heavier. Based on a recent survey, the average web page surpassed the 3 MB mark. CloudMosa Secure Browser uses a proprietary compression algorithm to transmit web data to your computer, and it can save up to 90% of your bandwidth on regular web browsing.
